

RayGlides 3W/4W EV Kit Cooling Controller - PCB Project & Design Files

This folder contains the CAD design specifications, PCB project netlists, and Gerber layer exports.

1. PCB Project Specifications (KiCad-based format)

- * **Project File**: `RayGlides\_Cooling\_Controller.kicad\_pro`
- * **Schematic File**: `RayGlides\_Cooling\_Controller.kicad\_sch`
- * **PCB Layout File**: `RayGlides\_Cooling\_Controller.kicad\_pcb`

2. Gerber Export Configurations

The following standard RS-274X Gerber extensions are used for exporting to PCB manufacturers:

Gerber File	Layer Type	Description
:--- :--- :---		
RayGlides_Cooling_Controller.GTL	Top Copper	Copper routing, ground pours, and component pads on Layer 1
RayGlides_Cooling_Controller.GBL	Bottom Copper	Power ground return plane and power trace routing on Layer 2
RayGlides_Cooling_Controller.GTS	Top Solder Mask	Solder mask openings for components soldering
RayGlides_Cooling_Controller.GBS	Bottom Solder Mask	Solder mask coverage for bottom routing
RayGlides_Cooling_Controller.GTO	Top Silkscreen	Silk markings, reference designators, and board labels
RayGlides_Cooling_Controller.GBO	Bottom Silkscreen	Optional bottom manufacturer branding and RoHS labels
RayGlides_Cooling_Controller.GKO	Keep-Out / Outline	Board boundary profile (80mm x 55mm)
RayGlides_Cooling_Controller.DRL	Drill File	NC Drill files for plated-through holes and thermal vias
